

# Consumer Confidence Report Tularosa 2025

## **Spanish (Español)**

Este informe contiene información muy importante sobre la calidad de su agua beber. Tradúscalo o hable con alguien que lo entienda bien.

## **Is my water safe?**

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies. Last year, we conducted tests for over 80 contaminants. We only detected 12 of those contaminants and found only 1 at a level higher than the EPA allows. As we informed you at the time, our water temporarily exceeded drinking water standards. (For more information see the section labeled Violations at the end of the report.)

## **Do I need to take special precautions?**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

## **Where does my water come from?**

Our community's water supply comes from the Rio Tularosa, which is fed by many springs. We also have (1) backup well in case of emergencies.

## **Source water assessment and its availability**

If you would like more information about the source water assessment, contact NMED Drinking Water Bureau at 505-476-8620 or toll free 1-877-654-8720 or contact Village of Tularosa City Hall at 575-585-2771.

## **Why are there contaminants in my drinking water?**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity:

- microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife
- inorganic contaminants, such as salts and metals, which can naturally occur or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming
- pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses
- organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems
- radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

## **How can I get involved?**

If you would like to get involved, go to our website at [www.villageoftularosa.com](http://www.villageoftularosa.com) or follow the Village of Tularosa Facebook page for more information about any monthly meetings, workshops, or special meetings in regard to the Tularosa Water System.

## **Description of Water Treatment Process**

Your water is treated in a "treatment train" (a series of processes applied in a sequence) that includes coagulation, flocculation, sedimentation, filtration, and disinfection. Coagulation removes dirt and other particles suspended in the source water by adding chemicals (coagulants) to form tiny sticky particles called "floc," which attract the dirt

particles. Flocculation (the formation of larger flocs from smaller flocs) is achieved using gentle, constant mixing. The heavy particles settle naturally out of the water in a sedimentation basin. The clear water then moves to the filtration process where the water passes through sand, gravel, charcoal or other filters that remove even smaller particles. A small amount of chlorine or other disinfection method is used to kill bacteria and other microorganisms (viruses, cysts, etc.) that may be in the water before water is stored and distributed to homes and businesses in the community.

### **Water Conservation Tips**

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature.

- Take short showers - a 5-minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit [www.epa.gov/watersense](http://www.epa.gov/watersense) for more information.

### **Cross Connection Control Survey**

The purpose of this survey is to determine whether a cross-connection may exist at your home or business. A cross connection is an unprotected or improper connection to a public water distribution system that may cause contamination or pollution to enter the system. We are responsible for enforcing cross-connection control regulations and insuring that no contaminants can, under any flow conditions, enter the distribution system. If you have any of the devices listed below please contact us so that we can

discuss the issue, and if needed, survey your connection and assist you in isolating it if that is necessary.

- Boiler/ Radiant heater (water heaters not included)
- Underground lawn sprinkler system
- Pool or hot tub (whirlpool tubs not included)
- Additional source(s) of water on the property
- Decorative pond
- Watering trough

### **Source Water Protection Tips**

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:

- Eliminate excess use of lawn and garden fertilizers and pesticides - they contain hazardous chemicals that can reach your drinking water source.
- Pick up after your pets.
- If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system.
- Dispose of chemicals properly; take used motor oil to a recycling center.
- Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community or visit the Watershed Information Network's How to Start a Watershed Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.

### **Monitoring and Reporting of Compliance Data Violations**

Tularosa Water System received 6 violations for non-submittal of the CCR certification form. We have submitted the forms and are back in compliance. We are working with NMED to close out the violation for the 2023 CCR.

NMED conducted sanitary surveys in 2019, 2022, and 2025. We have 12 outstanding significant deficiencies, and we are still out of compliance. We are working with NMRWA and getting technical assistance to address these deficiencies and return to compliance.

We have 47 outstanding Public Notice violations. We are currently working with a technical assistance provider from NMRWA to help us close out these violations.

### **Violations of terms of variance, exemption, or administrative or judicial order**

We received an administrative order (AO) without penalties on Dec. 20, 2019, for non-compliance with six (6) violations that included 34 action items that needed to be corrected in order for the AO to be lifted.

We then received a second administrative order w/ penalties on July 30, 2024, because we failed to address the issues outlined in the 2019 AO. We are working to correct our outstanding violations to get the NMED Administrative Order lifted.

### **Additional Information for Lead**

Our system inventory may include lead service lines. Tularosa Water System has not completed the lead and copper inventory but is in the process of doing so.

Lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. TULAROSA WATER SYSTEM is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact TULAROSA WATER SYSTEM (Public Water System Id: NM3514019) by calling 575-585-2771 or emailing [rbryant@villageoftularosa.com](mailto:rbryant@villageoftularosa.com) . Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <http://www.epa.gov/safewater/lead> .

---

## **Water Quality Data Table**

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally

occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

| Contaminants  | MCLG<br>or<br>MRDLG | MCL,<br>TT, or<br>MRDL | Detect<br>In<br>Your<br>Water | Range |      | Sample<br>Date | Violation | Typical Source  |
|---|---------------------|------------------------|-------------------------------|-------|------|----------------|-----------|---|
|   |                     |                        |                               | Low   | High |                |           |   |
| <b>Disinfectants &amp; Disinfection By-Products</b>   |                     |                        |                               |       |      |                |           |   |
| (There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants) |                     |                        |                               |       |      |                |           |   |
| Chlorine (as Cl <sub>2</sub> ) (ppm)  | 4                   | 4                      | 0.6                           | 0.4   | 0.6  | 2025           | No        | Water additive used to control microbes   |
| Haloacetic Acids (HAA5) (ppb)   | NA                  | 60                     | 21                            | 13.1  | 23.2 | 2025           | No        | By-product of drinking water chlorination   |
| TTHMs [Total Trihalomethanes] (ppb)   | NA                  | 80                     | 87                            | 56.1  | 127  | 2025           | Yes       | By-product of drinking water disinfection   |
| <b>Inorganic Contaminants</b>   |                     |                        |                               |       |      |                |           |   |
| Barium (ppm)  | 2                   | 2                      | 0.021                         | NA    | NA   | 2025           | No        | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits                                |
| Fluoride (ppm)  | 4                   | 4                      | 0.5                           | NA    | NA   | 2025           | No        | Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories |
| Nitrate [measured as Nitrogen] (ppm)  | 10                  | 10                     | 0.37                          | NA    | NA   | 2025           | No        | Runoff from fertilizer use; Leaching from septic  |

| Contaminants | MCLG<br>or<br>MRDLG | MCL,<br>TT, or<br>MRDL | Detect<br>In<br>Your<br>Water | Range |      | Sample<br>Date | Violation | Typical Source                             |
|--------------|---------------------|------------------------|-------------------------------|-------|------|----------------|-----------|--|
|              |                     |                        |                               | Low   | High |                |           |  |
|              |                     |                        |                               |       |      |                |           | tanks, sewage; Erosion of natural deposits |

**Microbiological Contaminants**

|                 |    |     |     |    |    |      |    |             |
|-----------------|----|-----|-----|----|----|------|----|-------------|
| Turbidity (NTU) | NA | 0.3 | 100 | NA | NA | 2025 | No | Soil runoff |
|-----------------|----|-----|-----|----|----|------|----|-------------|

100% of the samples were below the TT value of .3. A value less than 95% constitutes a TT violation. The highest single measurement was .16. Any measurement in excess of 1 is a violation unless otherwise approved by the state.

**Radioactive Contaminants**

|                                   |    |    |      |    |    |      |    |                             |
|-----------------------------------|----|----|------|----|----|------|----|-----------------------------|
| Alpha emitters (pCi/L)            | 00 | 15 | 1.3  | NA | NA | 2024 | No | Erosion of natural deposits |
| Radium (combined 226/228) (pCi/L) | 00 | 5  | 0.03 | NA | NA | 2024 | No | Erosion of natural deposits |
| Uranium (ug/L)                    | 00 | 30 | 2    | NA | NA | 2024 | No | Erosion of natural deposits |

| Contaminants | MCLG | AL | Your<br>Water | Range |      | # Samples<br>Exceeding<br>AL | Sample<br>Date | Exceeds<br>AL | Typical Source |
|--------------|------|----|---------------|-------|------|------------------------------|----------------|---------------|----------------|
|              |      |    |               | Low   | High |                              |                |               |                |

**Inorganic Contaminants**

|  |     |     |       |        |     |   |      |    |  |
|--|-----|-----|-------|--------|-----|---|------|----|--|
| Copper - action level at consumer taps (ppm) | 1.3 | 1.3 | 0.043 | 0.0015 | 0.1 | 0 | 2022 | No | Corrosion of household plumbing systems; Erosion of natural deposits |
| Lead - action level at consumer taps (ppb)   | 00  | 15  | 1.9   | 0.62   | 4.8 | 0 | 2022 | No | Corrosion of household plumbing systems; Erosion of natural deposits |

**Violations and Exceedances**

**TTHMs [Total Trihalomethanes]**  
 Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

| <b>Unit Descriptions</b>                    |   |
|---|---|
| <b>Term</b>                                 | <b>Definition</b>   |
| ug/L  | ug/L : Number of micrograms of substance in one liter of water  |
| ppm   | ppm: parts per million, or milligrams per liter (mg/L)  |
| ppb   | ppb: parts per billion, or micrograms per liter (µg/L)  |
| pCi/L                                       | pCi/L: picocuries per liter (a measure of radioactivity)  |
| NTU   | NTU: Nephelometric Turbidity Units. Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration system.  |
| NA  | NA: not applicable  |
| <b>Important Drinking Water Definitions</b> |   |
| <b>Term</b>                                 | <b>Definition</b>   |
| MCLG  | MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.  |
| MCL   | MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.   |
| TT  | TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.  |
| AL  | AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.   |
| MRDLG                                       | MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. |
| MRDL  | MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.                              |
| MNR   | MNR: Monitored Not Regulated  |
| MPL   | MPL: State Assigned Maximum Permissible Level   |
| 90th Percentile                             | Compliance with the lead and copper action levels is based on the 90th percentile lead and copper levels. This means that the concentration of lead and copper must be less than or equal to the action level in at least 90% of the samples collected. |
